General Dynamics to support the FBI with information technology services

The Federal Bureau of Investigation (FBI) has selected General Dynamics Information Technology, Fairfax, Va., a business unit of General Dynamics, an IT management service provider, as one of 46 awardees of the Information Technology Supplies and Support Services (ITSSS) contract. The multiple award, indefinite delivery/indefinite quantity contract has a potential value of \$30 billion to all awardees over eight years if all options are exercised.

General Dynamics will provide technical services for the FBI's multiple information technology systems and engage in developmental projects and programs. These services include refreshing program information technology, hardware and software operations and maintenance, server maintenance, hardware configuration, database management, technical/enterprise architecture and design, critical infrastructure protection, network security and risk and vulnerability management. The work will be primarily performed in the Washington, DC, area, Clarksburg, WVa., and Quantico, Va. (Source: General Dynamics, <http://www.gdit.com>)

Real time video analytics by Agent Vi integrated with Milestone Platform

Scott County Jail, Scott County, Minn., has chosen Agent Vi, Rosh Ha'ayin, Israel, a developer of video analytics, to deploy a real time video analytics solution using its Vi-System, integrated with a surveillance platform provided by Milestone Systems, Copenhagen, Denmark, a developer of open platform IP video management software.

Vi-System was installed at Scott County Jail by embedding video analytics in Axis Q7406 encoders that stream video from analog cameras. The solution's distributed an-

alytics architecture – which splits the video analysis between the camera and the server – enabled the use of a single analytics server to handle all 90 cameras.

No additional hardware or equipment had to be purchased for the Milestone surveillance system to support video analytics. With the Milestone-Agent Vi integration, events generated by Vi-System detections are sent to the Milestone XProtect Smart Client for display.
