

innovi Updates - August 2021

Dear innovi User,

Here are innovi's latest feature updates:

1

Investigation - Heatmap view: Query results may now be displayed as heatmap overlay. The heatmaps can be used to easily identify event hot spots.

2

Monitor - New event notifications: New events will remain highlighted until opened by the user.

3

Monitor - Filter setting are automatically saved: When a user defines viewing filters under monitor (event type, time ranges, etc.). These filters are stored individually- per user and on the single computer (of which the settings were set).

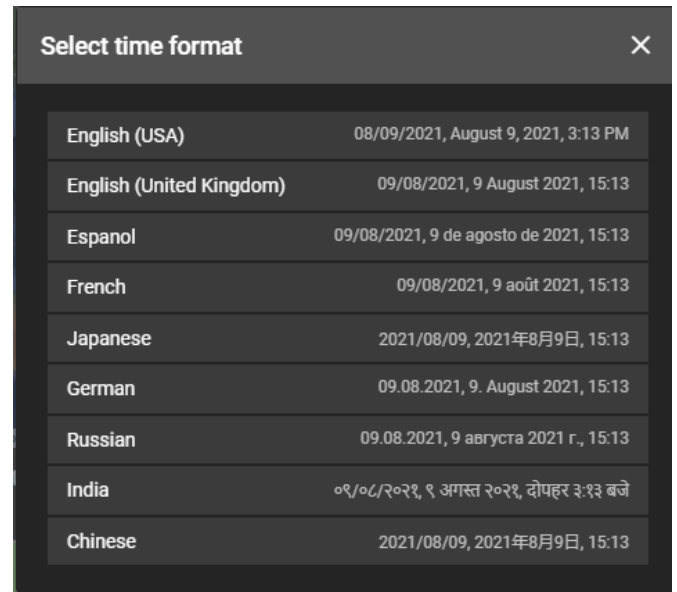

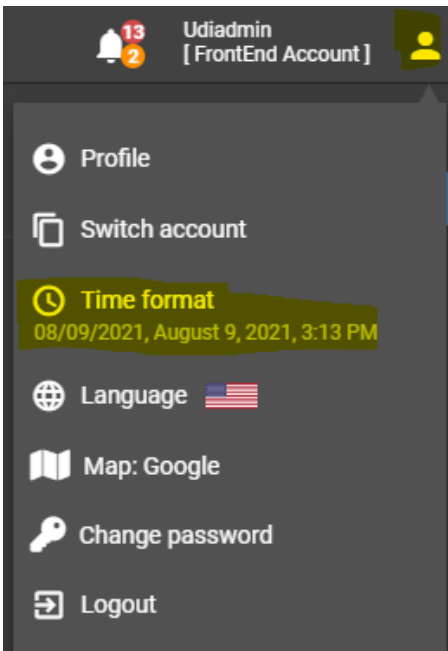

i.e. the next time the user logs into monitor view, these new defined filters will automatically apply.

4

Time display format: Users can now manage the time display format. These settings are stored individually- per user and on the single computer (of which the settings were set).

A- Click the personal settings icon, then click the time format menu item:

B- Select a time format from the list:

5

Speed filter for real time rules: A minimal speed threshold can now be set for “Moving in an area” and “Line crossing”. Only objects that move at a higher speed than the defined threshold will trigger an event.

6

Security group changes: Security groups can now be applied to top level folders only.
