

# innovi Updates – February 2022

## Dear innovi User,

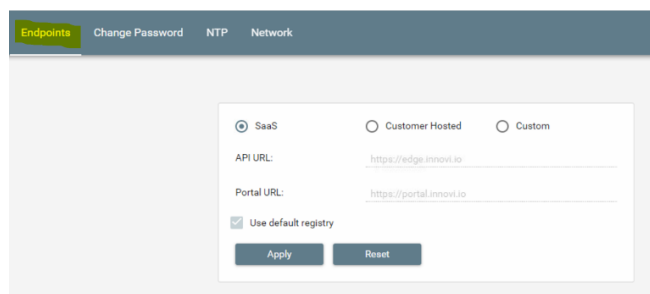

The following updates were included in the recent innovi update that took place 01 - February - 2022.

1

### Adding an innovi Edge device: Display hosting options

In the edge device configuration page – Endpoints tab, users can select between 3 options (radio buttons): SaaS, Customer Hosted and Custom.

The endpoints are automatically set for SaaS and Customer Hosted options and manually set for the Custom option.

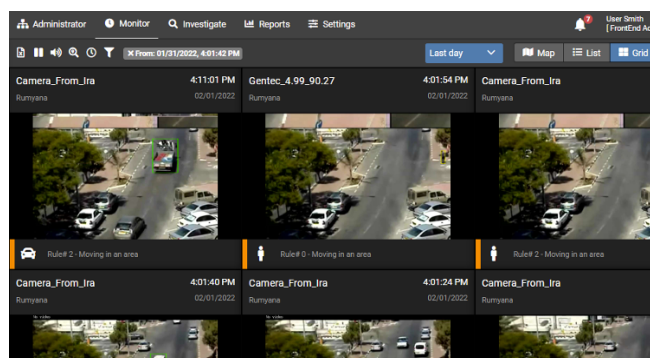

2

### [ Public preview ]: New Monitoring Grid View

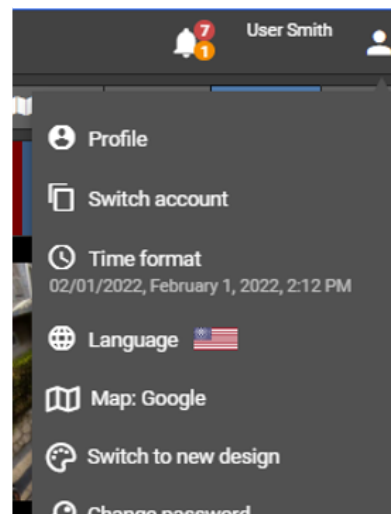

The Grid view in the Monitoring module has been modernized to show more information and improve responsiveness. It is currently released in public preview, meaning you can switch the new functionality on and try it out if you want. You can switch back any time.

*The new Monitoring Grid View, showing Folder/Site name as well as all previously available information.*

### To enable the preview functionality:

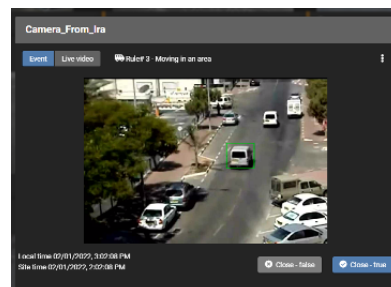

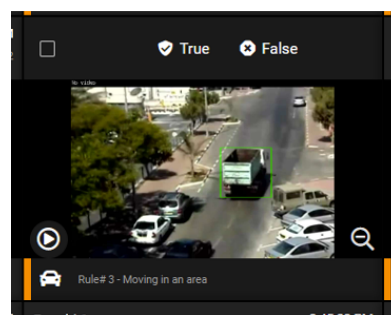

- Select “Switch to new design” in the main menu.
- Go to the Monitoring module and select the Grid view.
- You will now see the new Monitoring Grid View.

### New features in Monitoring Grid View:

When moving your mouse over an individual alarm clip you get instant access to multiple functions:

- Instantly classify the event as true/false 
- Mark multiple clips for bulk action 
- Zoom in/out for the video clip 
- Play the video sequence 
- Click the video clip to open the popup

As always, we welcome any feedback you might have.

3

**innovi Edge CI (Customer Installed) – support for Ubuntu 20.04**  
innovi Edge CI now supports Ubuntu 20.04
