

# innovi Updates – May 2022

## Dear innovi User,

The following update will be included in the next innovi update that will take place on 17th May 2022.

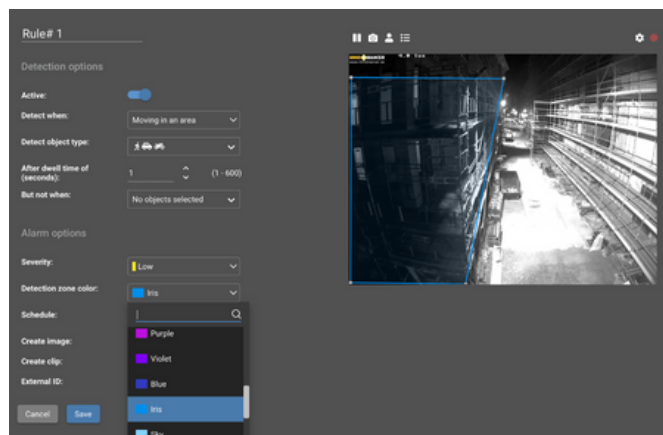

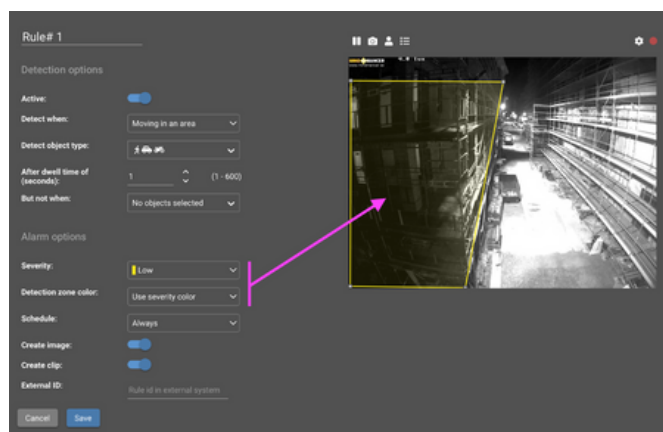

1

### Detection zone color

In order to be able to differentiate between rules, severities, and detection zones in a camera view, the system gets a new functionality that allows user to change the overlay color of any detection zone. Detection zone may inherit a color from a rule's severity level, as well as get a custom color applied to it.

Detection zone color is changed in the Rule options. By choosing the "Use severity color" from the "Detection zone color" dropdown menu, a user can assign the rule's severity color to a detection zone.

Choosing a custom color from the "Detection zone color" dropdown menu will assign a custom color to a detection zone.

2

## Audit log enhancements

ilInnoVi system's audit logs have now a simplified text formatting which makes available information more reader-friendly and easier to understand.
