

innovi Update

November 2022

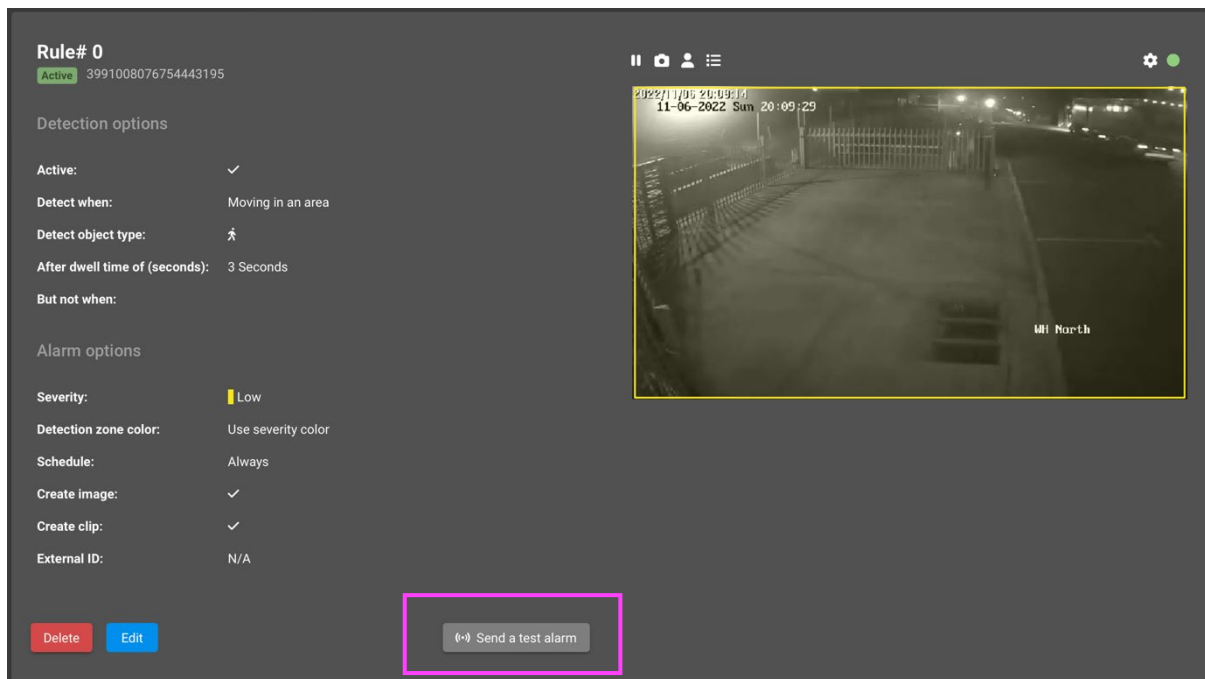

Dear innovi user,

The following functionality is included in innovi update that took place on 8th November 2022.

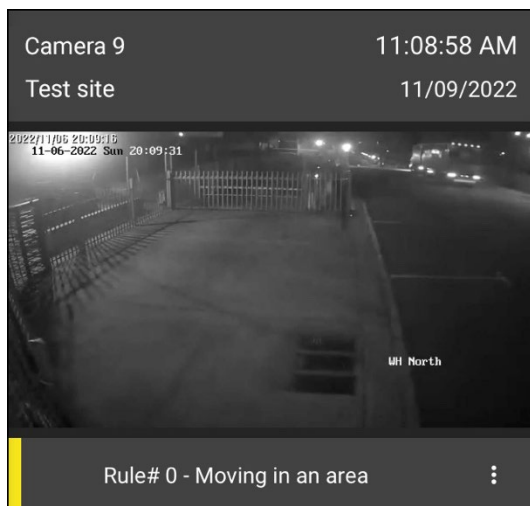

innovi – General functionality

Send a test alarm from a rule

The rule panel now contains a "Send a test alarm" button which creates an event in the Monitor view. The same event also propagates to all defined integrations.

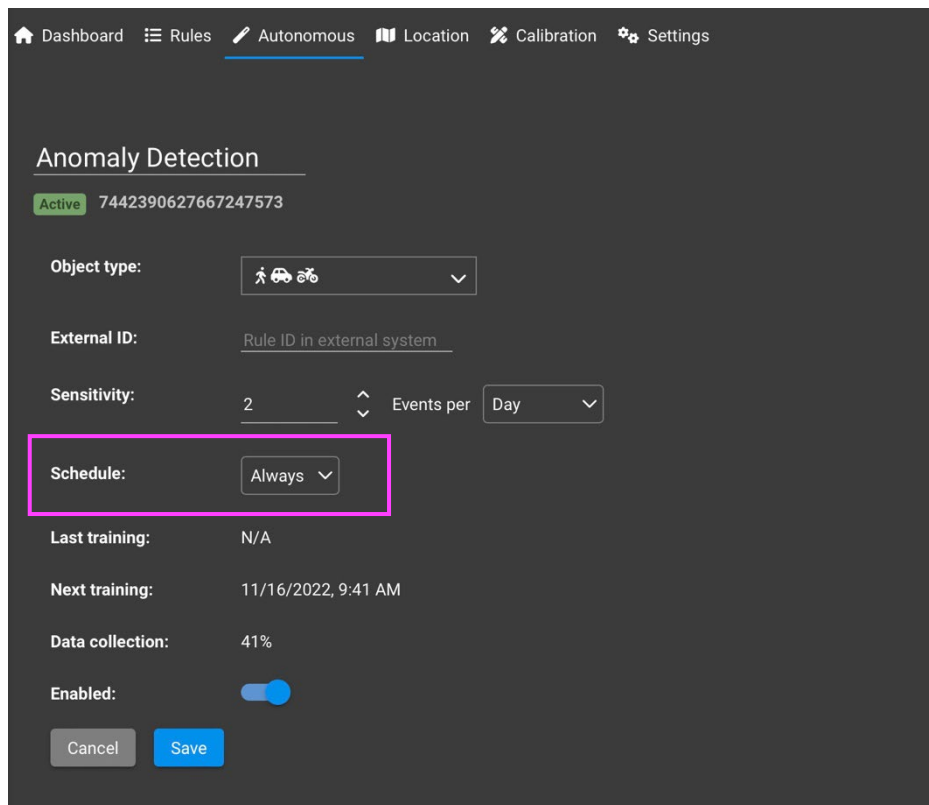

Test alarm in the Monitor view:

For more information visit www.agentvi.com or email sales@agentvi.com

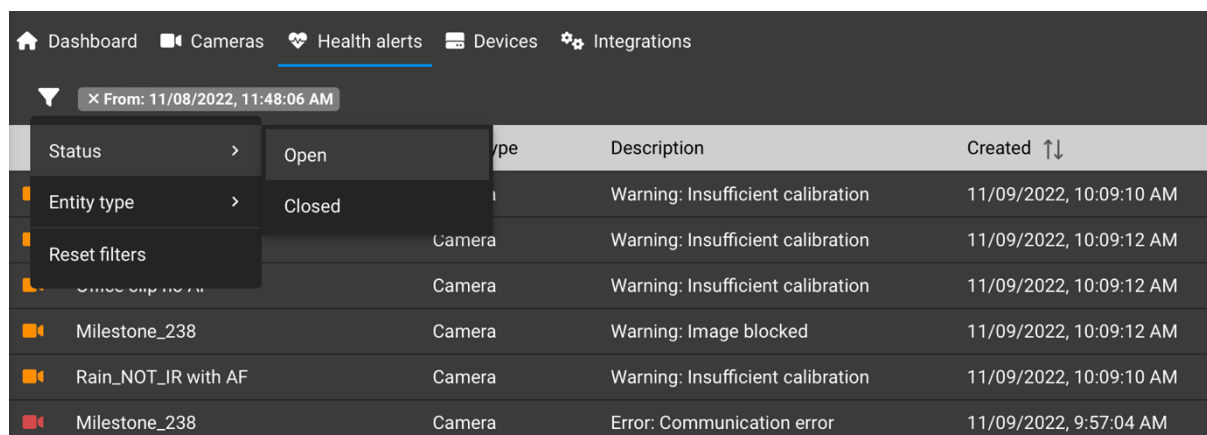

The anomaly rule gets a schedule

To create better control over the training period in the Anomaly algorithm, the users are now able to create and apply a schedule that controls when the rule is active or inactive.

Filtering in the health alerts list

The filter functionality lets users filter the health alerts list for Open/Closed alerts, as well as for the type of device that invoked the health alerts.

For more information visit www.agentvi.com or email sales@agentvi.com

Integration invocations event list

A new Invocation results panel allows users to check if an Integration target is receiving the events properly. The panel is reached through Settings -> Integration targets, clicking on a specific integration target in the list, and selecting the Invocation results tab.

Default e-mail integration target for all new accounts

For all new accounts, the e-mail integration target is now created automatically. This is done to simplify the workflow in several parts of the user interface, which will make the system more streamlined and user-friendly.

innovi – Analytics improvements

Improved object tracking

The object track handling has been improved.

Improved train detection model

The system is now running an improved train detection model trained with a new data.
