

innovi Update 21, March 2023

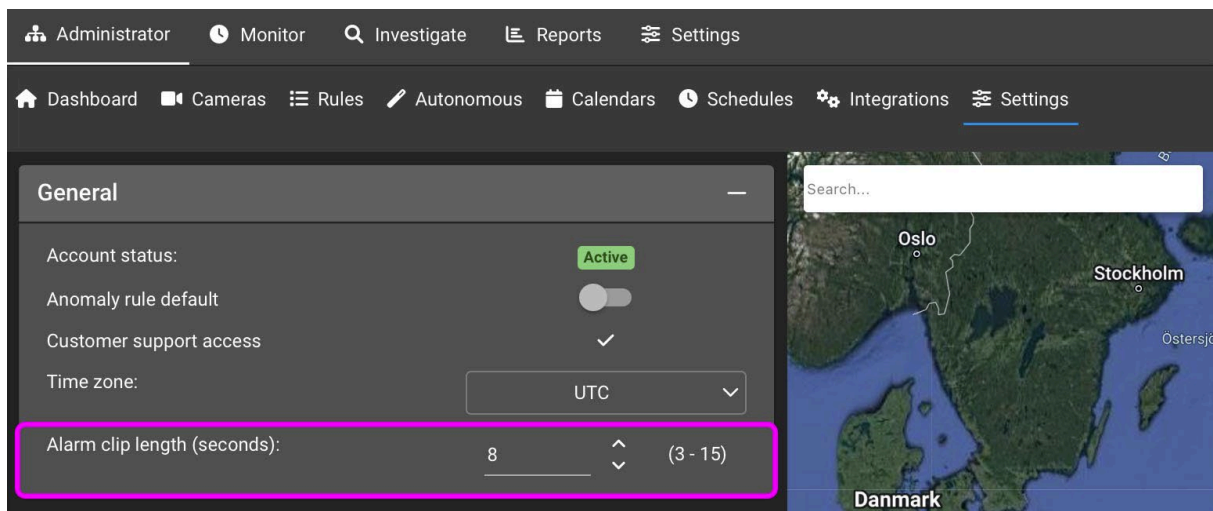

Dear innovi user,

The following functionality is included in the innovi update that took place on 21 March 2023.

innovi – General functionality

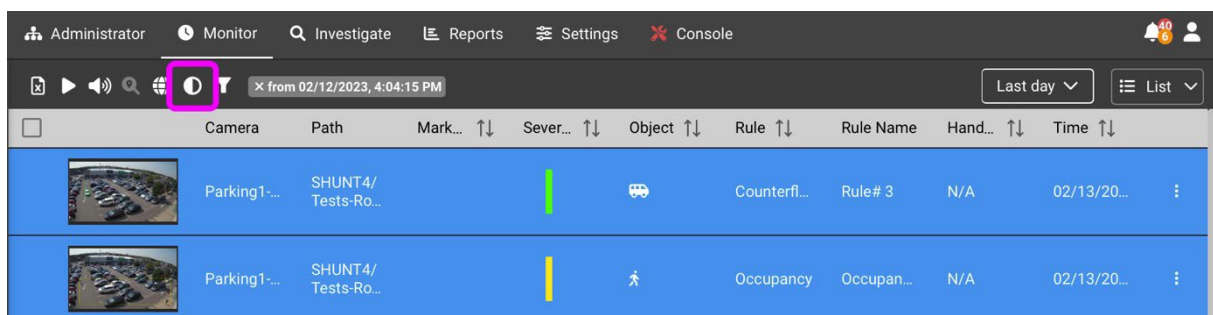

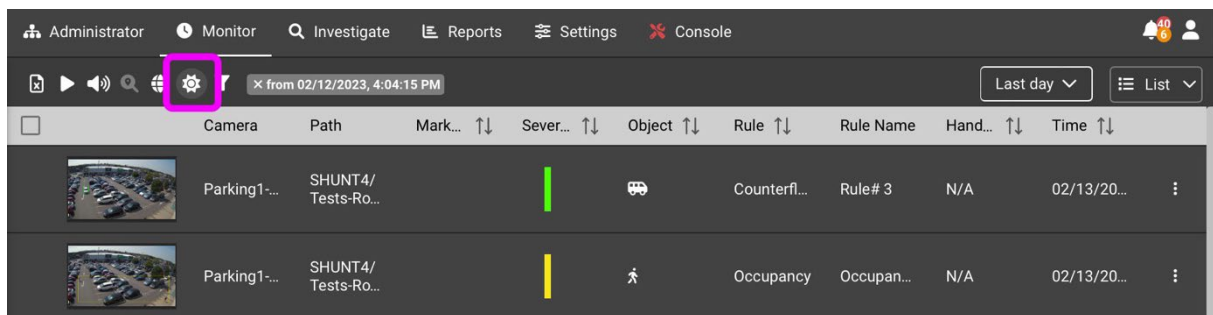

Video clips with configurable length

Users can now change the length of the alarm video clips. This can be done in the General panel in the Administrator tab -> Setting tab. The minimum length can be set to 3 seconds, and the maximum length can be set to 15 seconds. The default value is 8 seconds.

Redesigned monitor list

The new monitor list is now available with the high contrast setting. The high/low contrast mode can be switched in the toolbar above the list.

Investigation video player – Milestone integration

When opening a video clip from the Investigation view, the system will automatically open the video from the Milestone integration. If the system is not connected to Milestone, it will open video clip with the default video player.

A detailed installation guide is available on Agent Vi Website.
